

PCUCA & Interlink Supply Presents

# Applied Microbial Remediation Technician

*Featuring John Banta, Restoration Consultants*

## **Applied Microbial Remediation Technician Training:**

A 4-day course that provides restorers with the necessary tools to perform mold & sewage remediation. Mold contamination has been identified as a major contributor to building related illness & poor indoor air quality. Without proper mitigation of a water loss, mold can become a problem in less than 48 hours. In addition, the effects and handling of sewage back-flow has become a major concern for the restoration industry. This course includes hands-on training. The AMRT/S Exam is offered at the conclusion of the course.
